

# **Ausstieg aus fossilen Energieträgern einleiten: Grüne unterstützen die Lofoten Deklaration**

Außerordentliche Bundesdelegiertenkonferenz  
26. - 27. Januar 2018, Hannover

Gremium: Bundesdelegiertenkonferenz  
Beschlussdatum: 27.01.2018  
Tagesordnungspunkt: Beschlüsse (vorläufig)

- 1 BÜNDNIS 90/DIE GRÜNEN unterstützen die Forderungen der Lofoten Deklaration, in der mehr als
- 2 200 zivilgesellschaftliche Gruppen am 07.09.2017 Länder, Regionen und Unternehmen
- 3 auffordern, vor dem Hintergrund der Pariser Klimaziele die Erkundung und Ausbeutung fossiler
- 4 Energieträger zu beenden und einen gemanagten Abbau des fossilen Sektors einzuleiten.

## **5 The Lofoten Declaration**

### **6 Climate Leadership Requires a Managed Decline of Fossil Fuel 7 Production**

8 Global climate change is a crisis of unprecedented scale, and it will take unprecedented  
9 action to avoid the worst consequences of our dependence on oil, coal, and gas. Equally as  
10 critical as reducing demand and emissions is the need for immediate and ambitious action to  
11 stop exploration and expansion of fossil fuel projects and manage the decline of existing  
12 production in line with what is necessary to achieve the Paris climate goals.

13 Clean, safe, and renewable fuels are already redefining how we see energy and it is time for  
14 nations to fully embrace 21st century energy and phase out fossil fuels.

15 **The Lofoten Declaration affirms that it is the urgent responsibility and moral  
obligation of  
16 wealthy fossil fuel producers to lead in putting an end to fossil fuel development and  
to  
17 manage the decline of existing production.**

18 We stand in solidarity with, and offer our full support for, the growing wave of impacted  
19 communities around the world who are taking action to defend and protect their lives and  
20 livelihoods in the face of fossil fuel extraction and climate change. It is a priority to  
21 elevate these efforts. Frontline communities are the leaders we must look to as we all work  
22 together for a safer future.

23 A global transition to a low carbon future is already well underway. Continued expansion of  
24 oil, coal, and gas is only serving to hinder the inevitable transition while at the same  
25 time exacerbating conflicts, fuelling corruption, threatening biodiversity, clean water and  
26 air, and infringing on the rights of Indigenous Peoples and vulnerable communities.

27 Energy access and demand are and must now be met fully through the clean energies of the  
28 21st century. Assertions that new fossil fuels are needed for this transformation are not  
29 only inaccurate; they also undermine the speed and penetration of clean energy.

30 We recognize that a full transition away from fossil fuels will take decades, but also, that  
31 this shift is an opportunity more than a burden. We are in a deep hole with climate. We must  
32 begin by not digging ourselves any deeper.

33 Research shows that the carbon embedded in existing fossil fuel production will take us far  
34 beyond safe climate limits. Thus, not only are new exploration and new production  
35 incompatible with limiting global warming to well below 2°C (and as close to 1.5°C as  
36 possible), but many existing projects will need to be phased-out faster than their natural  
37 decline.

38 This task should be first addressed by countries, regions, and corporate actors who are best  
39 positioned in terms of wealth and capacity to undergo an ambitious just transition away from  
40 fossil fuel production. In particular, leadership must come from countries that are high-  
41 income, have benefitted from fossil fuel extraction, and that are historically responsible  
42 for significant emissions.

43 We call on these governments and companies to recognize that continued fossil fuel  
44 exploration and production without a managed decline and a just transition is irreconcilable  
45 with meaningful climate action. We also note that there are tremendous leadership  
46 opportunities for these countries to demonstrate that moving beyond oil, coal, and gas –  
47 both demand and production – is not only possible, but can be done while protecting workers,  
48 communities, and economies.
